

Electrolysis

After Care

Your skin can be a little sensitive after this as your follicles have been treated with heat. For 24-48 hrs you must avoid the following:

- Touching or rubbing the treated area
- Heavy makeup and dirty makeup brushes
- Heat (saunas, sun-bathing, sweating)
- Chlorinated water or any other harsh chemicals

- Exfoliants and stimulating skin care e.g retinol, AHA, BHA, Peels, Microdermabrasion
- Avoid laser and IPL for 4 weeks before and after
- You cannot receive IPL or Laser whilst getting treated with electrolysis

Electrolysis removes the hair. This does take a couple of sessions. It is hard to know exactly how long this will take. This treatments does remove the hair and it will change the colour of the hair to be lighter with the more treatments we do.
